## Introduction

This report, *Wisconsin Deaths, 2001*, presents key information about deaths of Wisconsin residents that occurred in 2001 and previous years. Information is included on the number and rate of deaths overall and by age, sex and cause. *Wisconsin Deaths* has been published annually since the 1995 data year, and replaced the earlier report series *Vital Statistics* (data years 1984-1994), *Public Health Statistics* (1952-1983), and *Annual Report of Morbidity and Mortality* (1948-1951).

Beginning with 1999 data, causes of death have been coded using the International Classification of Diseases, Tenth Revision (ICD-10). ICD-10 replaces the ICD-9 that was used to code death data for the years 1979-1998. ICD-10 is a classification system that was developed collaboratively by the World Health Organization (WHO) and 10 international centers to reflect advances in medical science and changes in diagnostic terminology, and to promote international comparability in the presentation of mortality statistics.

A comparability table has been prepared to assist the reader in comparing numbers of deaths by cause between 1999 (and subsequent years) and the years before 1999. The table is available through the Internet on the Department of Health and Family Services Web site at: <http://www.dhfs.state.wi.us/deaths>. You can also obtain a copy by contacting Joyce Knapton at the Bureau of Health Information (see contact information on the following page).

The source of data for this report is death certificates filed with the State Registrar, Vital Records Section, Bureau of Health Information (BHI), Division of Health Care Financing, Department of Health and Family Services (see sample, page 84). Most of these deaths occurred in Wisconsin, although BHI receives death certificates of Wisconsin residents from other states and countries as well. (Reports of deaths that occurred outside Wisconsin are thought to be substantially complete.)

All tables and figures in this report present Wisconsin resident data (deaths of Wisconsin residents). This means that deaths have been assigned to the area where the person lived (usually legal residence), regardless of where the death occurred.

Chapter 69, Wisconsin Statutes, authorizes the Department of Health and Family Services to supervise and direct the collection of vital statistics death data. This statute also indicates how local registrars are to collect and file certificates for deaths that occur in their jurisdictions.

We would like to recognize the following: local Register of Deeds offices and the Milwaukee and West Allis city health offices (for registering deaths), coroners and medical examiners (for certifying causes of death), hospitals and physicians (for certifying deaths), and funeral directors (for filing death certificates). We would also like to acknowledge and thank other states and countries for submitting data on deaths of Wisconsin residents that occurred there.

The Department of Health and Family Services produced this publication. Staff of the Vital Records Registration and Statistics Unit, Bureau of Health Information, collected and compiled the death records. Joyce Knapton prepared the report and wrote the narrative. Patricia Nametz edited the report. Draft review and comments were provided by Peter Rumm, M.D., in the Bureau of Chronic Disease Prevention and Health Promotion, Division of Public Health, and by Karl Pearson and Sandra Park in the Bureau of Health Information. The report was prepared under the supervision of Lynnette Traas, Supervisor,

Registration and Statistics Unit, and the overall direction of Vonnie Buske, Deputy Director, and Sandra Breitborde, Director, Bureau of Health Information.

Death, birth, hospitalization and other health-related statistical information for Wisconsin is also available through the Internet on the Department of Health and Family Services Web site, at <http://www.dhfs.state.wi.us/stats>.

## Key Findings

- In 2001, there were 46,537 deaths of Wisconsin residents, 132 more than in 2000.
- The 2001 Wisconsin death rate (deaths per 1,000 population) was 8.6, similar to rates for the past 25 years.
- The Wisconsin death rate has been almost identical to the United States death rate every year since 1945.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.
- As a percent of total deaths, cremations increased by 12 percentage points over the past decade (from 16 percent to 28 percent). Conversely, burials decreased (from 75 percent to 62 percent).
- In 2001, an autopsy was performed in just 7 percent of deaths, compared with 14 percent in 1980.
- The percentage of deaths with an autopsy decreased in most age groups from 1980 to 2001.
- In 2001, a total of 81 deaths were reported on death certificates as due to injuries at work.
- As in 2000, the three leading causes of death in 2001 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 59 percent of total deaths among Wisconsin residents.
- Accidents were the leading cause of death among males ages 1-14, 15-24 and 25-44.
- Accidents were the leading cause of death among females ages 1-14 and 15-24, but among women ages 25-74, cancer was the leading cause of death.
- Diseases of the heart and cancer were the two leading causes of death among whites, African Americans and American Indians, while cancer and cerebrovascular diseases led among the Asian population. In 2001, diseases of the heart accounted for 23 percent of deaths among African Americans, 28 percent of deaths among whites, 20 percent of deaths among American Indians and 16 percent of deaths among Asians.
- Accidents accounted for 14 percent of deaths among American Indian males, compared with 8 percent of deaths among Asian males, 6 percent of deaths among white males, and 5 percent of deaths among African American males.
- Diseases of the heart and malignant neoplasms (cancer) were the two leading causes of death in 2001 among white, African American and American Indian females. The two leading causes of death for Asian females were malignant neoplasms and cerebrovascular diseases (stroke).

Notes: Rates by age and sex are deaths per 100,000 population in that age group or age/sex group.  
The total includes one death where sex was unknown.

- Age-specific death rates generally increase with age, except that the death rate for infants (under age one) is higher than that for children in other age groups.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.

- In 2001, death rates ranged from a low of 810.9 per 100,000 population in the Southern region to a high of 920.6 in the Northern region. Differences in the death rate by region reflect many factors, including the region's population age structure.

Note: The “residence” column indicates the number of deaths among residents of the county, regardless of where the person died. The “occurrence” column indicates the number of deaths that occurred in that county, regardless of where the person resided. Statewide totals for the two columns differ because some Wisconsin resident deaths occur outside the state, and some deaths of non-residents occur within the state.

Notes: There were two deaths in 1980 and one death in 2000 for which age was unknown. These deaths are included in the total.

- In 2001, an autopsy was performed in just 7 percent of deaths, compared with 14 percent in 1980.
- The percentage of deaths with an autopsy decreased in most age groups from 1980 to 2001.

Notes: Categories "white" and "black" include people of Hispanic origin; people of Hispanic origin may be any race. This table indicates the number of death certificates that specified that an injury at work may have contributed to the death, either as the underlying cause of death or as a contributing factor.

- In 2001, a total of 81 deaths were reported on death certificates as due to injuries at work.
- Ninety-one percent of deaths due to injuries at work were to white males.

Note: Infant deaths are those that occur before one year of age.

- Milwaukee County accounted for 30 percent of all infant deaths statewide in 2001 (and 21 percent of all births).

Source: Bureau of Health Information, Division of Health Care Financing, Department of Health and Family Services.

Notes: The immediate cause of death is the final disease or condition resulting in death. The underlying cause of death is the disease or injury that initiated events resulting in death. All-mention cause of death includes all conditions listed on the death record, including those in the chain of events leading to death and others contributing to the death. Thus, the all-mention cause of death column will always have a higher total than the total number of deaths.

For the ICD-10 codes used for each cause, see Technical Notes, page 81.

- The underlying cause is generally referred to as the “cause of death.” For example, 10,752 Wisconsin residents died in 2001 due to malignant neoplasms (underlying cause). For only 8,798 residents, a malignant neoplasm was indicated as the final disease or condition that caused the person to die (immediate cause). For 11,914 residents, a malignant neoplasm contributed to death (all-mention cause).

Notes: Age-specific rates are deaths per 100,000 population in that age group. A rate is not calculated when there were fewer than 20 deaths. Underlying cause of death is the disease or injury that initiated events resulting in death.

The total for 2000 includes one record where age was unknown. The total for 2001 includes one record where sex was unknown.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 78 and page 79 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- As in 2000, the three leading causes of death in 2001 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 59 percent of total deaths among Wisconsin residents.
- Although diseases of the heart constituted the leading cause of death overall, within specific age groups this category was the leading cause only among persons 75-84 years and 85 years and over.
- Accidents were the leading cause of death for age groups 1-14, 15-24, and 25-44.

Notes: Age-specific rates are deaths per 100,000 males in that age group. A rate is not calculated when there were fewer than 20 deaths.

The total for 2000 includes one record where age was unknown.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 78 and page 79 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Accidents were the leading cause of death among males ages 1-14, 15-24 and 25-44.
- Suicide was the second leading cause of death among males ages 15-24 and 25-44.
- Alzheimer's disease was the tenth leading cause of death among men ages 75-84, and the sixth leading cause among men age 85 and over.

Source: Bureau of Health Information, Division of Health Care Financing, Department of Health and Family Services. For the population data used to calculate rates, see Technical Notes, page 85.

Notes: The age/sex-specific rates are deaths per 100,000 population in that age/sex group. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 81. Conditions abbreviated in this table are spelled out in full in the Technical Notes.  
The total includes one death for which sex was unknown.

Notes: Totals include thirteen records in 2000 and 6 records in 2001 for which race was unknown. Totals include five decedents in 2000 and two decedents in 2001 with race reported as Hawaiian. Underlying cause of death is the disease or injury that initiated the events resulting in death.

For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 78.

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and cancer were the two leading causes of death among whites, African Americans and American Indians, while cancer and cerebrovascular diseases led among the Asian population. In 2001, diseases of the heart accounted for 23 percent of deaths among African Americans, 28 percent of deaths among whites, 20 percent of deaths among American Indians and 16 percent of deaths among Asians.
- Accidents accounted for over 4 percent of total deaths in 2001, and a similar percentage among whites and blacks, but 12 percent of American Indian deaths and 6 percent of Asian deaths.
- Differences in leading causes of death by race reflect differences in population age structure (as well as many other possible factors): compared with the total state population, larger proportions of blacks and other minority groups are children and young adults.

- Diseases of the heart and malignant neoplasms (cancer) were the leading causes of death in 2001 for males of all races in Wisconsin except Asians, for whom malignant neoplasms and cerebrovascular diseases were the top two causes of death.
- Cerebrovascular diseases (stroke) were the third leading cause of death among white males, while homicide was the third leading cause of death among black males.
- Accidents accounted for 14 percent of deaths among American Indian males, compared with 8 percent of deaths among Asian males, 6 percent of deaths among white males, and 5 percent of deaths among African American males.

There was one record in 2001 for which sex was unknown, so the total for males and females will not add to the total on page 43. The 2000 total includes two records for which race was listed as Hawaiian and the 2001 total includes one record where race was listed as Hawaiian. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause of death groupings, see Technical Notes, page 78. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and malignant neoplasms (cancer) were the two leading causes of death in 2001 among white, African American and American Indian females. The two leading causes of death for Asian females were malignant neoplasms and cerebrovascular diseases (stroke).
- The third leading cause of death was cerebrovascular diseases among black and white females, accidents among American Indian females, and diseases of the heart among Asian females.

### **Reporting Requirements**

As specified in Chapter 69, Wisconsin Statutes, the following is a brief outline of the sequence of events that take place when a death occurs in Wisconsin:

Within 24 hours after being notified of a death, the filing party (usually a funeral director) must present a certificate of death to the physician or medical examiner responsible for completing and signing the medical certification.

The medical certifier has six days after pronouncement of death to return the certificate of death back to the filing party.

Within two days after receipt of the medical certification, the filing party must present the death certificate to the registration district (local Register of Deeds or City Health Office).

There should be no more than nine calendar days total from date of death until filing at a local office.

The local Register of Deeds or City Health Office must transmit the death certificate to the State Registrar within ten working days (not including weekends) after its receipt from the filing party.

State statute allows up to 21 days from the date of death for notification to the State Registrar.

### **Death Certificate**

A copy of a sample death certificate form can be found on page 84.

**International Classification of Disease (ICD-10) Codes**

Causes of death for deaths that occurred in 2001 have been coded according to the World Health Organization's *International Classification of Diseases—Tenth Revision* (Geneva, Switzerland, 1992). This classification system is the current standard used by the National Center for Health Statistics. All of the cause-of-death groupings utilized in this report were recommended for state use by the National Center for Health Statistics and the World Health Organization.

Listed below are the ICD-10 codes used for ranking leading causes of death in Tables 11, 12, 13, 17, 18 and 19 (List A). Please note that different groupings are used for ranking leading causes of infant deaths (less than 1 year) in Tables 11, 12 and 13 (List B).

**List A**

- Salmonella Infections (A01-A02)
- Shigellosis and Amebiasis (A03, A06)
- Tuberculosis (A16-A19)
- Whooping Cough (A37)
- Scarlet Fever and Erysipelas (A38, A46)
- Meningococcal Infection (A39)
- Septicemia (A40-A41)
- Syphilis (A50-A53)
- Acute Poliomyelitis (A80)
- Arthropod-Borne Viral Encephalitis (A83-A84, A85.2)
- Measles (B05)

Note: This table shows current life expectancy at various ages for Wisconsin's total population and for males and females. These life expectancy estimates are based on age-specific death rates that occurred during the three-year period 1998-2000.

For example, the life expectancy at birth in 1998-2000 was 78.3 years. This is the average number of years that babies born in these years would live if throughout their lives they experienced the age-specific death rates experienced in 1998-2000. For boys, life expectancy at birth was 75.6 years. For girls, life expectancy at birth was 80.9 years.
